

Cleaning machine selection questionnaire

Company:

Address:

Postal code / city:

Contact person:

Phone / fax:

Branch:

Type of production:

Are you currently using any
industrial washing
machine?

What kind?

Type of cleaning medium:

Quantity:

1. How should the parts be after washing process?

cleaned

degreased

blown with compressed air

dried

2. How have the parts been washed so far? (basket dimensions, quantity of baskets per hour, operation times, etc.)

3. What was the result of cleaning?

4. What are the parts made of? Fe-Ms-Al

12. What capacity should provide a cleaning machine?

- basket dimensions in mm
(L x B x H)

- baskets capacity per
hour

- basket
brutto
weight (kg)

13. Are additional basket movements needed?

rotating swinging

NOTES:

14. Preferable cleaning methods:

immersion spraying forced flow ultrasonics
other

15. Cleaning machine will be operated:

manually automatic

16. Should a cleaning machine be equipped with a distillation device?

Yes No

17. Should a cleaning machine be equipped with an indissoluble contaminations filtration system?

Yes No

Filter gradation (μm)

Quantity of insoluble
contaminations:

18. What space is available for a cleaning machine? (A x B x C)

19. Where will a cleaning machine be placed?

ground level underground higher floor

20. What media are available to supply a cleaning machine with?

electricity (V, Hz)

steam ($^{\circ}\text{C}$, bar)

hot water: inlet ($^{\circ}\text{C}$, bar)

outlet: ($^{\circ}\text{C}$, bar)

compressed air (bar)

tap water

Yes No

hardness
